Hiring Team
Equal Experts South Africa

Re: Senior Data Engineer

Dear Hiring Team,

I am applying for the Senior Data Engineer role with Equal Experts South Africa. The position is unusually close to the work I have delivered throughout my career: building production data pipelines and warehouses, modelling data in SQL, supporting BI teams, strengthening security and governance, and solving client problems in distributed consulting environments.

In my current consulting role, I lead Microsoft Purview governance delivery for a banking client and have engineered AML analytical solutions on Azure Synapse and SQL Server. I have also built multi-entity financial ETL pipelines from SAP data into warehouse fact models, implemented reconciliation controls, delivered Power BI reporting, and supported regulated production environments. Earlier roles at Coca-Cola, Standard Bank, Anglo American, Investec and Life Healthcare add broad experience across Azure, Snowflake, SQL, Python, data modelling and enterprise BI.

Equal Experts appeals to me because the role combines hands-on engineering with client collaboration, pragmatic delivery and mentoring. I have worked directly with business and technical stakeholders, coached junior developers, and translated complex data requirements into maintainable solutions. I am based in South Africa and eligible to work here without sponsorship.

I would welcome the opportunity to discuss how my Azure data engineering, SQL, governance and consulting experience can contribute to Equal Experts and its clients.

Kind regards,

Jubhele Shange
